

Ideas for a Modern OCaml Web Portal

Ashish Agarwal
OCaml User Meeting
Telecom ParisTech
Paris, France
April 15, 2011

Degrees of Separation from OCaml

The Problem

- OCaml is more mature than its web presence suggests
- There are many OCaml books, blogs, tutorials, and libraries
- But no central portal leading to them
- Content frequently out of date and/or incomplete

The Solution

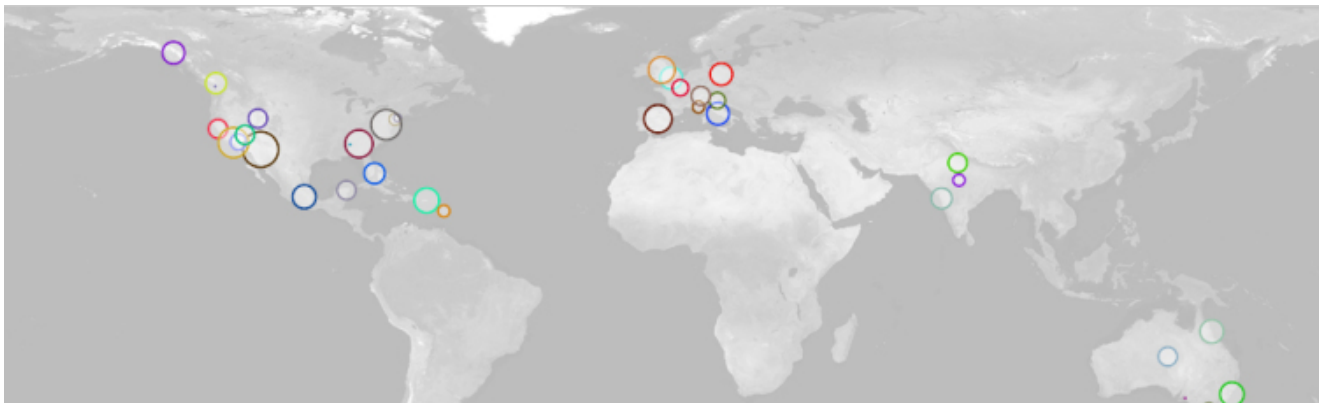

- Build a modern website
 - dynamic
 - social
 - aesthetic

User Accounts

- Login through OpenID, Facebook, LinkedIn

- Account Profile
 - (opt-in) pull information from linked accounts: Facebook, LinkedIn
- Authorize content modifications
- Map showing where OCaml programmers are based

Email Lists: Hosting and Archiving

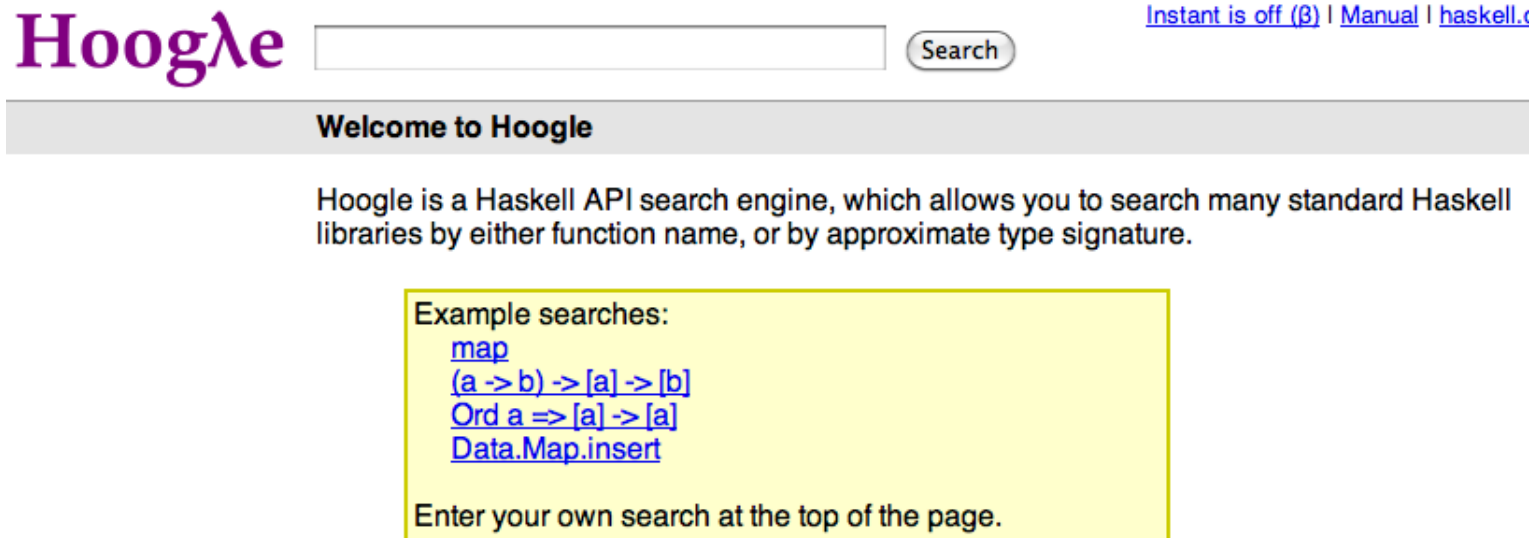

- List of lists
 - OCaml List
 - OCaml Beginner's List
 - all project lists from ocamlforge
 - many external lists
- Make searchable
 - text search all lists over all contents
 - selectively search specific lists
 - limit by date, author
- Subscribe by clicking check box on your account page

Libraries: Catalog and Distribution

- Central place to search for libraries
- Libraries are tagged
- Integrate theme and function with rest of website
 - e.g. same login account should be usable to update/add libraries
- User comments and simple ranking
 - like Amazon 
 - 1 – 5 camels
- _oasis provides metadata
- Oasis-DB will provide comprehensive repository
Also pull from github
- List channels library is available from:
oasis, godi, debian, redhat, etc

Libraries: Online Documentation

- Important for search engines
- Allows links from emails and web content, and cross-references between libraries
- Improve search

- Available for each version of every library

Blog

- planet.ocamlcore.org

Integrate within main website in terms

- design
- administration, users can request adding their own blog
- search
- One main blog on front page with major announcements
- Include in search results

Books

- Several OCaml related books exist but not easy to find
 - <http://caml.inria.fr/about/books.en.html> lists many but important omissions
- Host in central location with common look and feel
 - of course only applies to free books and
 - with permission of authors
- Optimize for search
 - may require modifying format
- User comments (like Real World Haskell)

In the second equation, we first apply `break` to our input string. The prefix is the substring before a line terminator, and the suffix is the remainder of the string. The suffix will include the line terminator, if any is present. [One comment](#)

Dale Jordan 2008-07-07

[6191](#)

You use "line terminator" in the text but "isLineSeparator" in the code above. It would be better to be consistent.

Comment

[\[help \]](#)

Your name

Required so we can [give you credit](#)

Your URL

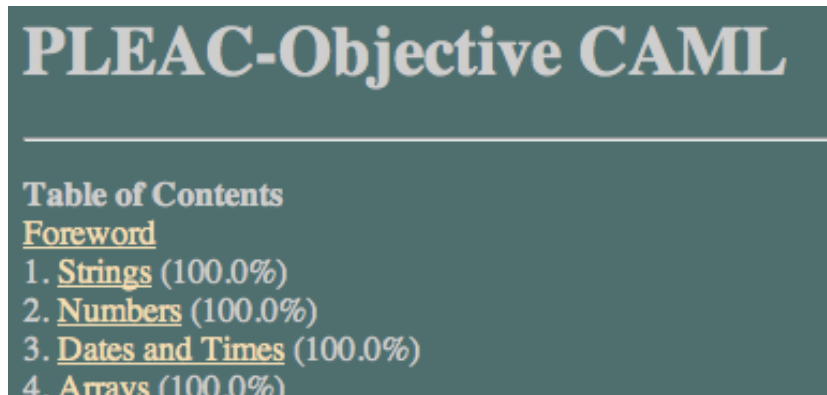

Optional link to blog, home page, etc.

Remember you? ☒

The `"pre :"` expression tells us that we should add the `pre` value to the front of the list of lines. We then use a `case` expression to inspect the suffix, so we can decide what to do next. The result of the `case` expression will be used as the second argument to the `(:)` list constructor. [4 comments](#)

Tutorials

- [Pleac](#)

The image shows a screenshot of the 'PLEAC-Objective CAML' Table of Contents. The title 'PLEAC-Objective CAML' is at the top in a large, bold, serif font. Below it, a horizontal line separates the title from the 'Table of Contents' section. The 'Table of Contents' is listed in a smaller, bold, serif font. Below the title, the word 'Foreword' is listed. Then, four numbered items are listed: '1. Strings (100.0%)', '2. Numbers (100.0%)', '3. Dates and Times (100.0%)', and '4. Arrays (100.0%)'. The items are in a bold, serif font, and the percentages are in a smaller, regular, serif font.

PLEAC-Objective CAML	
Table of Contents	
<u>Foreword</u>	
1. <u>Strings</u>	(100.0%)
2. <u>Numbers</u>	(100.0%)
3. <u>Dates and Times</u>	(100.0%)
4. <u>Arrays</u>	(100.0%)

- Absorb ocaml-tutorial.org
- Users can add their own tutorials easily
 - wiki should be friendly, support ocaml syntax highlighting automatically
- An editor to
 - oversee all content
 - make sure tutorials are organized coherently
 - solicit tutorials from qualified authors

Brand Cohesion

- CAML, Objective Caml, O'Caml, or OCaml?
 - search engines cannot tell these are the same
 - neither can beginners
- URL scheme
 - offer for using existing ocamlforge user account system
 - so is it in *ocamlforge* account or an *ocamlcore* account?

Design

- It should look good!
- Inspiration from other sites...

The world's most advanced
open source database.

PostgreSQL.org Website Design Contest

Posted on **2009-05-06**

Posted by **josh@postgresql.org**

Are you a web designer? Know someone else who is?

The current design of postgresql.org needs a refresh! We're looking for talented designers interested in re-developing our look. If picked, your design will be the public face the world's most advanced open source database.

To help find a great designer, we've decided to put \$2000 on the table.

The first stage of the project is a design mock-up. A panel of PostgreSQL community members will act as judges for a \$1000 (US) prize! We want our web design to reflect the care, dedication and excellence of our developers. We've outlined in detail what we're looking for on the [Contest Requirements Page](#).

The second stage of the project is implementation. The winning designer will develop the stylesheets and create any images required, and work with the PostgreSQL Web Team to deploy the new design throughout our infrastructure. An additional \$1000 will be awarded to the designer once the new look goes live!

Agile and Scalable

MongoDB (from "humongous") is a scalable, high-performance, [open source](#), document-oriented database. Written in C++, MongoDB features:

- **Document-oriented storage »**

[JSON-style documents](#) with dynamic schemas offer simplicity and power.

- **Full Index Support »**

Index on any attribute, just like you're used to.

- **Replication & High Availability »**

Mirror across LANs and WANs for scale and peace of mind.

- **Auto-Sharding »**

Scale horizontally without compromising functionality.

Implementation Technology

- Proposed website is essentially a content-management-system (CMS)
- Leading CMS system is Drupal
 - a PHP based solution
- Ocsigen has momentum
 - and we like Ocaml
- ocamlcore integration will be valuable
 - ocamlcore-api eases integration
 - it uses Ocsigen
- Search solutions
 - lucene, search-servers
- Email searching
 - requires mirroring email lists

Project Management

- Need a small core team to build URL scheme, and
- Write skeleton code covering overall site functionality
- Prioritize functionality
- Willing participants implement the functionality
- Contract professional designer
- Community owns the website
